

Merced Central Plant/Telecom Reliability Upgrade

Fiscal Year: 2014-15

Project Description

The project provides necessary upgrades to the Campus Central Plant and Telecommunications Building and related campus infrastructure including the provision of additional utilities capacity and increasing equipment and facility reliabilities to ensure campus operations and to protect critical infrastructure. The Project scope of work includes four major components: 1) Increases the Central Plant cooling capacity; 2) Corrects existing telecommunications facility deficiencies; 3) Provides increased emergency back-up power; and 4) Protects the campus water supply.
