

University of California, Riverside
 Application for 2008 Larry L. Sautter Award for Innovation in Information Technology

Academic Personnel eFile Online Merit and Promotion System

“The process is very paper driven in the UC and we have now designed a "green" solution, an electronic version called eFile, that will allow us to save time and resources in maintaining this review system... a socially responsible effort to reduce paper waste that also increases the efficiency of the review for faculty.” – Betty Lord, Vice Provost Academic Personnel UCR

eFile Project Highlights

eFile has received high praise from faculty and staff at campuses across the UC system. The response has been so positive that a Memorandum of Understanding (MOU) is now in place to allow any UC campus to implement eFile. UCR has presented eFile to large conferences of faculty and administrators from throughout the UC system, sparking unprecedented dialog about

UC's academic personnel processes. The eFile system captures granular data in a relational database in the support of merit/promotion actions and immediate generation of faculty biosketches and other reports supporting various faculty needs (e.g. extramural funds requests).

In summary, the system captures every facet of a faculty member's professional career, supports automated generation of curriculum vita, and is used for a routed, paperless review of merit and promotion files.

eFile Overview:

- Captures granular (table and field) data in the support of merit/promotion actions.
- Features seamless integration with other campus systems to *import* supporting data for Teaching/Instruction, Faculty Evaluations, and Biographical information.
- Supports automated generation of Curriculum Vita and NSF Biosketches for faculty.
- Saves time and paper with online routing of the complete file and documentation for review and approvals.
- System may be adopted for use at other UC campuses with similar infrastructures.
- Represents the collaboration of faculty with technical, financial, administrative, and academic personnel staff.
- Future enhancements will broaden the scope of the system to include more academic personnel actions, eligibility lists, and reporting capabilities.
- Over 350 faculty have active eFiles within the system and two years of merits have been processed with the system.
- All Departmental Academic Personnel Staff have received training for eFile Data Entry and Snapshot generation.

Project Summary

The Academic Personnel eFile system (eFile) at UCR represents a significant improvement of the academic personnel review process for faculty. Assembling and reviewing faculty merit and promotion portfolios online is faster, simpler and more efficient using this stable, secure, and flexible system. Updated, accurate, and comprehensible information is essential to the faculty review process and the eFile system provides faculty with a secure, web-based, environment in which to maintain academic accomplishments and process academic actions.

Features and Benefits:

- The eFile system is a stable, secure, and easily accessible online application.
- Faculty and/or Academic Personnel staff in the departments can quickly modify and add records as the faculty member's file is updated.
- "Snapshots" for specific actions (merits, promotions, etc.) can be generated using the existing records in the faculty member's eFile.

- An academic review file can be routed from the department, to the Dean's office, to the Academic Personnel office, to the Senate Committee on Academic Personnel, to the Vice Provost for Academic Personnel and to the EVCP/Chancellor, all electronically.
- Faculty can use the information in eFile to automatically generate Curriculum Vitae, Custom Reports, and National Science Foundation Biosketches.

Technical Overview

System guidance and oversight

Functionality, enhancements and changes are made to the eFile System based upon input, guidance, and direction from UCR's Academic Information Systems Steering Committee (AIS) to the campus central technology organization, Computing and Communications (C&C). Additionally, the eFile System adheres to the policies and procedures set forth by the UCR Academic Personnel Office Academic Review procedures "The Call" document.

User Authorization and Single Sign-on (SSO)

The campus Central Authentication Service (CAS) provides single sign-on access to eFile. The freely available Central Authentication Service was originally developed by Yale University and has since become a JA-SIG project.

Importantly, CAS utilizes UCR's identity management systems to authenticate users (via LDAP). For more information on UCR's identity management solutions, please visit the following URL: http://www.cnc.ucr.edu/iviews/enterprise_dir/

Integration with EACS.

eFile is seamlessly integrated with UCR's Enterprise Access Control System (EACS). Using EACS, 200+ UCR Systems Access Administrators (SAAs) located throughout campus departments and units assign roles to faculty and staff. Roles grant access to various functionality within the eFile system such as maintenance of faculty career information, peer reviews, approvals and recommendations. *For more information on EACS, please visit the following URL:*
http://www.cnc.ucr.edu/iviews/enterprise_acc_control/

Authorization granularity varies by application; moreover, in many cases, EACS also provides applications an as needed routing engine. For eFile, authorization may be "read-only" access (e.g. authorization for a candidate to view their eFile), or may permit approvals and denials (e.g. authorization of Vice Provost Academic Personnel to approve/deny Snapshots).

Integration with Campus Systems

The eFile system integrates with UCR's Course Reporting and Information System (CIRS) and UCR's online Student Evaluation system (iEval) to automatically populate faculty Teaching Load and Evaluations. This import functionality is optional and eFile allows manual entry/editing of teaching information as well as uploading of student evaluations in PDF format. The eFile system also integrates with the campus directory to automatically populate data for faculty biographies.

Automated Email Notifications

During the electronic routing of Merit and Promotion files (Snapshots), the system automatically sends out email to let users know that their action is required. Each email is tailored to a specific part of the review process and provides instructions to each user depending on role.

Search and Reporting Capabilities

The eFile system provides faculty with the ability to perform searches on their career information, whether they are looking for a specific publication or counting the number of pending patents. eFile's reporting capabilities allow faculty to generate a custom report and automatically create a Word document for further editing or printing.

Customer Satisfaction/Testimonials

"Getting the Associate Dean's (Linda's) comments and adding mine plus the overall recommendation is really easy. I really liked using the system and hated it when I had to go back on Sunday and review a regular printed file for someone else. We made a couple of suggestions for improvement in the system to your staff, but I'm really impressed with how well it looks and works!"

Donald A. Cooksey
Interim Dean
College of Natural and Agricultural Sciences

"What I like most about eFile is the reduction of errors. In the past, repeated editing of Word files allowed for a great amount of error (which I discovered when doing the basic entering). So too was the case with the constant changing of format with each annual edition of The Call. With eFile, one can research each entry, make sure the information is completely correct (e.g., final title, publishing date, etc.) and know that even if in the future the format changes, the basic data will not. Updating

and editing are easy. In time, it will reduce tremendously the amount of paper copies generated. The fact that it is electronically available, allows for all faculty who wish to review the file to do so at their convenience (even if that is at 2 a.m.). The subheadings in the snapshot allow one to move quickly to the area one is interested in without sifting through pages of paper.”

Robin Whittington
Academic Personnel Analyst – Sociology
College of Humanities, Arts and Social Sciences

“The Efile system has the capacity to store a wide range of faculty data for a variety of uses in a uniform matter and is ingenious in the way it creates and routes files. It is very straightforward to use for adding a wide range of faculty scholarly activities and has the potential to reduce the possibility of losing information and to help lower future workload. It is especially useful for keeping errors out of complex citations of foreign or technical titles, since once they are correct in the system, they will not have to be retyped. Citations are much more uniform, keeping proofreading at a minimum. There are opportunities built in the system to upload data from other systems, reduce paper waste and it will make it more flexible for faculty to review files. To be able to envision the future use of the system and to successfully submit an Efile merit was a milestone of progress.”

Tala Martinez
MSO Art & Art History
College of Humanities, Arts and Social Sciences

“The new efile system, which is fully deployed in our department has had numerous extremely positive effects. It has completely changed my fall schedule from one that was dominated by merits and promotions to one in which the personnel process is manageable and allows time for other endeavors. It has allowed me and the faculty the flexibility to review files while away from campus and as a result has increased faculty participation significantly. It has caused faculty candidates to take responsibility for their own personnel files to an extent not seen before, and therefore has relieved our personnel staff person of a considerable burden. It has obviously streamlined the entire process, made it more efficient, reduced time spent, and saved paper. Finally, it is relatively free of any significant bugs and errors, at least for the users, due to the extraordinary effort of its developers and my faculty are pleased to use it. This whole endeavor deserves great recognition for the UCR staff who developed and deployed it.”

Jodie Holt
Professor and Chair
Botany and Plant Sciences Department

“I have had the opportunity to utilize eFile in two contexts. My merit file in the 2007-08 academic year was an eFile. In addition, as Divisional Dean for the Life Sciences, I have evaluated all of the merit files for the departments of Botany and Plant Sciences, Biology, Biochemistry, and Cell Biology and Neuroscience as eFiles.

I am an enthusiastic supporter of the eFile system. While the system can be tweaked for improved performance, overall this program is fantastic. I love the fact that the faculty files are in a uniform format. This really eases the evaluation of files. I know where to find every piece of

information in the eFile. I find that I am spending less time in file evaluation overall. This is in part due to the uniformity of the files but also due to the fact that I can access the files at any location when I have the time. This accessibility allows me to review the file in the Deans office, department office or at home. It is more secure than the paper files since I no longer carry a “to be evaluated” file with me. I look forward to the day that promotions and career reviews are also eFiles.

From the perspective of a faculty member, I have also found eFile a plus. While it took a little bit of time to get the entered information accurate, since that time, eFile is a breeze. eFile has eliminated my need to keep an excel file of my professional activities. I use eFile to keep track of my published manuscripts, grant and paper reviews and invited presentations. While assembling my file, I sometimes pondered where an entry should be located. I found that my BPS liaison (Sherice Underwood) always identified the correct place for an entry rapidly. It should be noted; I also had these entry location questions with the paper version of merit files.

eFile is a faster, long lasting and flexible mechanism for evaluation of merit files by the departments and Deans.”

Dr. Linda Walling
Divisional Dean for Life Sciences, CNAS
Department of Botany & Plant Sciences/ Center for Plant Cell Biology

Timeframe of Implementation

- Fall 2006 - The eFile system pilot for faculty Merit files began.
- June 2007 - The eFile system pilot was completed with 5 Merit files electronically routed and evaluated.
- Spring and summer 2007 - Many training sessions were held for both faculty and staff in order to prepare for a phase 1 deployment of Merits for CHASS and CNAS departments.
- Fall 2007 - Phase 1 deployment of Merits began with participation from CHASS, CNAS, Bourns College of Engineering, Biomedical Sciences, and Graduate School of Education; some departments participating and processing all Merits through the eFile system and some departments processing just one Merit through the eFile system.
- Spring 2008 - 340 eFiles exist and 88 Snapshots are being processed in the eFile system. 60 Snapshots have been completely routed through the online system with a final decision from the Vice Provost.

Importance and Relevance to Other Institutions

UCR has been approached by several UC campuses, including Berkeley and UCSF, who would like to investigate implementing eFile. A Memorandum of Understanding was created to allow UC campuses to install, host and customize eFile to their needs.

Vision for the future of the eFile system

Future enhancements to the eFile system may include:

- Departmental control of ordering of Publications, University Service, and Professional Service

- Snapshot Viewing – Multiple Browsers Windows to View Various Sections
- Support for 2nd, 3rd, Merit specifications and Final Review Outcome
- Support Joint Appointments
- Ability for Faculty to generate Snapshots
- Support for Promotion / Advancements
