RESEARCH USING THE UC HEALTH DATA WAREHOUSE

Pagan Morris, MPH, Director of Research Initiatives at [CDI2](#) presented an overview of UC Health data and resources at the July 12, 2023 PCT Leads/Co-Leads/Secretaries meeting. Ms. Morris described the clinical data within [UCHDW](#) and described the UC Health Real World Evidence (RWE) Collaborative, which serves as a platform for UC Health leaders to share knowledge and best practices, foster partnerships with external stakeholders, conduct research and analysis, and promote education and training programs that advance the use of real-world evidence in healthcare. She also discussed the UC Health Data Discovery Platform (UCDDP) which is a secure, cloud-based data science environment that supports systemwide research efforts. Click [here](#) to access Ms. Morris's presentation. Any questions on using the [UCHDW](#) for research can be directed to healthdata@ucop.edu.

PHARMACY COLLABORATIVE TEAM OVERVIEW

UC Health Chief Pharmacy Executives and Officers have met informally for many years to network and share administrative challenges and successes. However, clinical and operational pharmacy stewardship efforts were rarely highlighted among this group due to limited representation of non-executive pharmacists, pharmacy technicians, and other pharmacy staff. In 2012, two pharmacy teams, Pharmacy and Therapeutics and Ambulatory Care, began meeting regularly and sought to formalize the collaborative relationship at the pharmacist/clinical specialist level among the sites. Over the next 10 years, many more teams formed including Purchasing, Transitions of Care, Critical Care, Controlled Substances, 340B, Oncology, and more.

In 2022, UC Health sought to formalize the Pharmacy Collaborative Team (PCT) structure to facilitate implementation of best practices, medication use evaluations, protocols, and other tools to improve patient care, reduce overall medication costs, and optimize revenue. An overarching PCT charter was developed to clearly define a PCT mission statement, goals and objectives, and detail leader and member responsibilities. A central web-based platform, SharePoint, was created for PCT workflow and information sharing.

Importantly, PCT leadership is shared among individual leaders among the UC academic medical centers (AMCs), so that team meeting topics and projects emphasize the needs of the AMCs. UC Health Clinical Pharmacy liaisons assist PCT leadership with collaborative functions including setting agendas and running meetings and with obtaining data needed to support collaborative projects. They also provide quarterly updates to CPO/CPEs on PCT meeting 'happenings', attend the UC Collab meeting, and train incoming collab leadership on the software used for PCT performance.

WANT TO GET MORE INVOLVED?

If you would like to get more information about work described in this newsletter, or would like to become more involved, you can visit our SharePoint site where you can find information on all the PCT projects, etc. The site is open to all UC Pharmacy employees, and just requires a brief set up process to access. Once you have access to the site, there are a variety of resources for pharmacy members including AMC pharmacy org charts, contact information for all PCT members, a list of all PCT projects, and more. Importantly, all PCT subpages are open to all, so you can see the collaborative PCT work. Please contact Julianna Burton at julianna.burton@ucop.edu for further information.
